

## Hands-on Lab : Download & install Anaconda

Time efforts: **15** minutes

### Objectives of exercise

- Download & install Anaconda
- Create Anaconda Environment for R and Python
- Install and run Jupyter Notebook

### Overview of Anaconda

There are several cloud-based data science tools that can make team collaboration more accessible. At times it's useful to work directly on your desktop.

Anaconda Distribution is an open-source distribution of Python and R languages. It comes with a repository of a large number of packages for data science and machine learning, with the most popular and commonly used ones pre-installed. It includes Anaconda Navigator, a graphical interface (GUI) that contains several tools, and IDEs such as Jupyter Notebooks and R Studio. It has binaries for major platforms, including Windows, Linux, and macOS. This lab includes instructions for downloading and installing Anaconda on Windows.

### Exercise 1: Download & Install Anaconda Distribution

**Step 1:** Use the below link to download the Anaconda distribution:

**Link for Download Anaconda Distribution:** <https://www.anaconda.com/products/distribution>

# ANACONDA DISTRIBUTION

The world's most popular open-source Python distribution platform

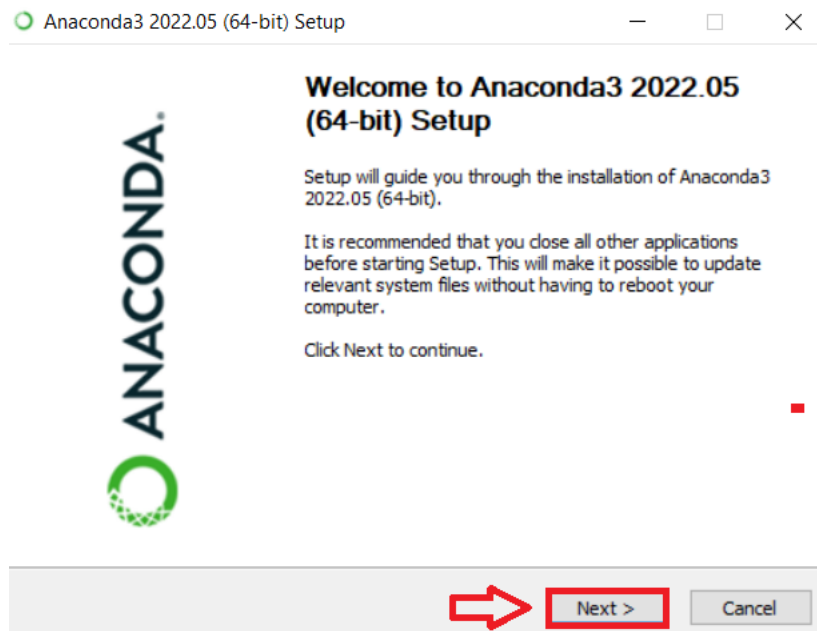

*Note: Depending on your **Operating system**, it would show the download link specific to your OS. Click the **Download** button to download it to your local machine.*

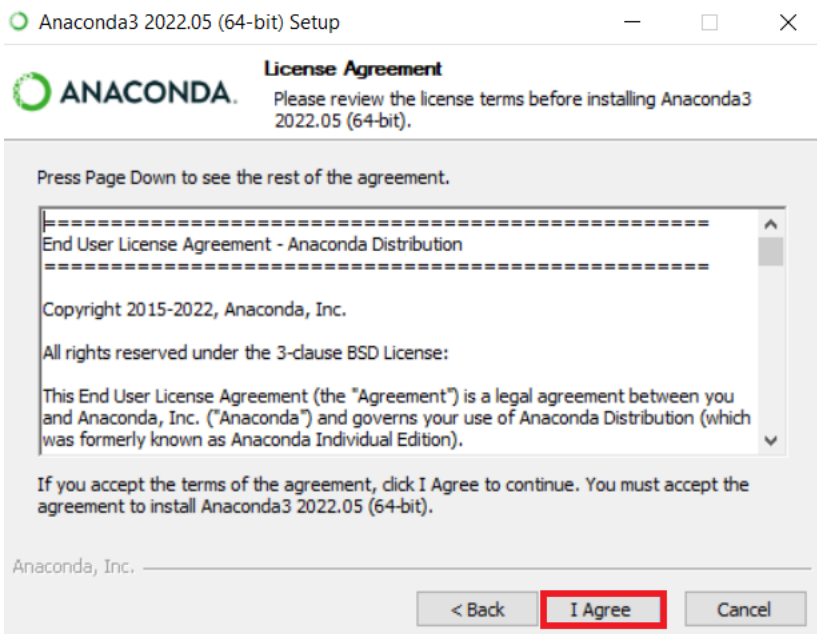

**Step 2:** Once the download completes, right-click the downloaded file and run it as **Administrator**.

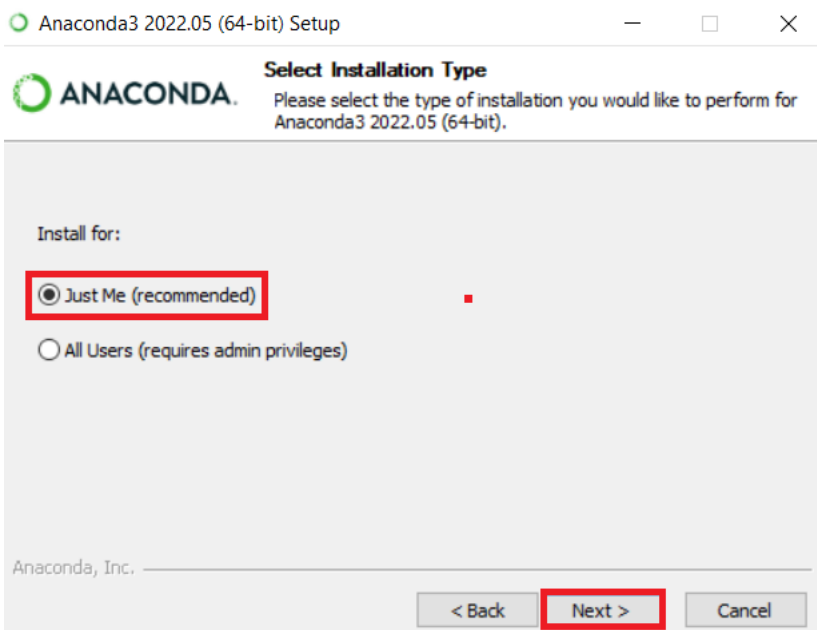

**Step 3:** At the beginning of the welcome window, you need to click **Next** to confirm the installation.

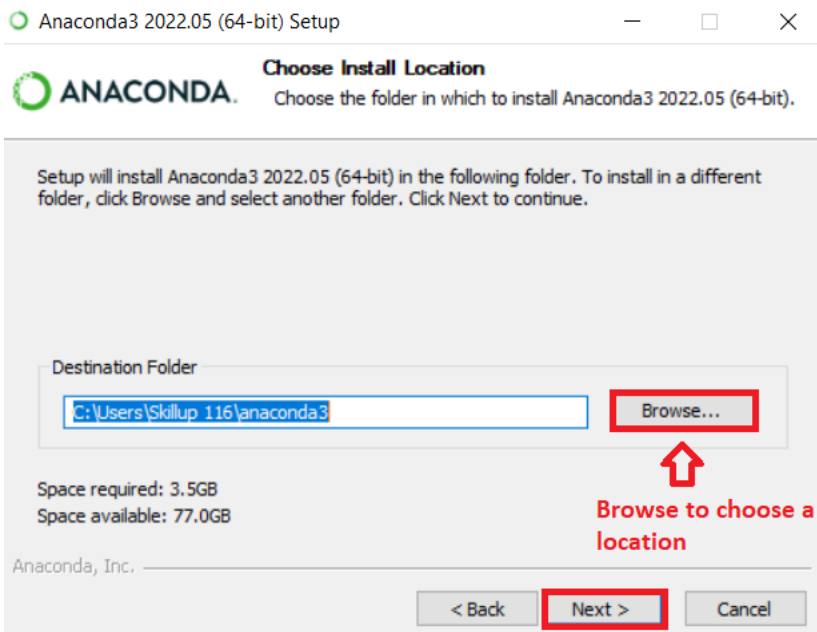

**Step 4:** Agree to the license.

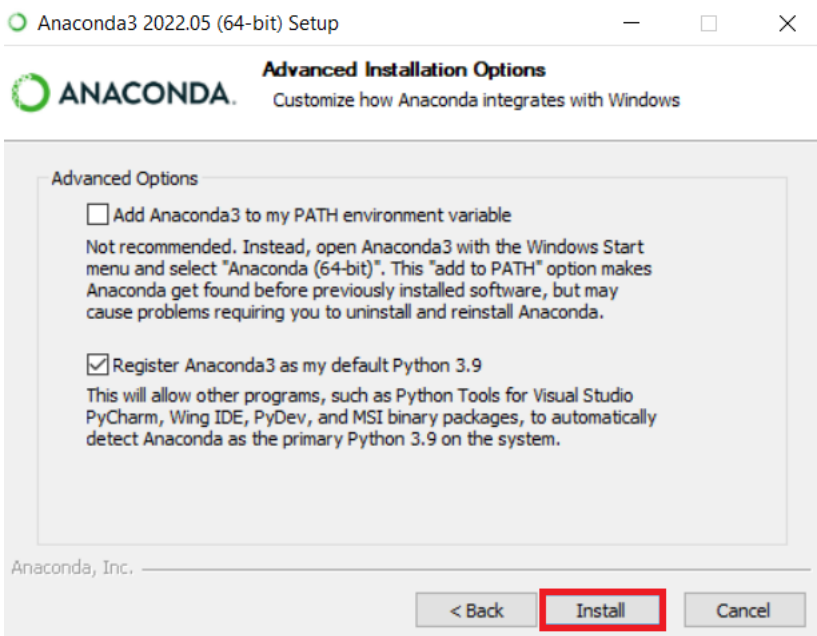

**Step 5:** In the installation window, select **Just me**, and click **Next**.

**Step 6:** Select the folder where you would like to **Install Anaconda**, or retain the **Default** installation location and click **Next**.

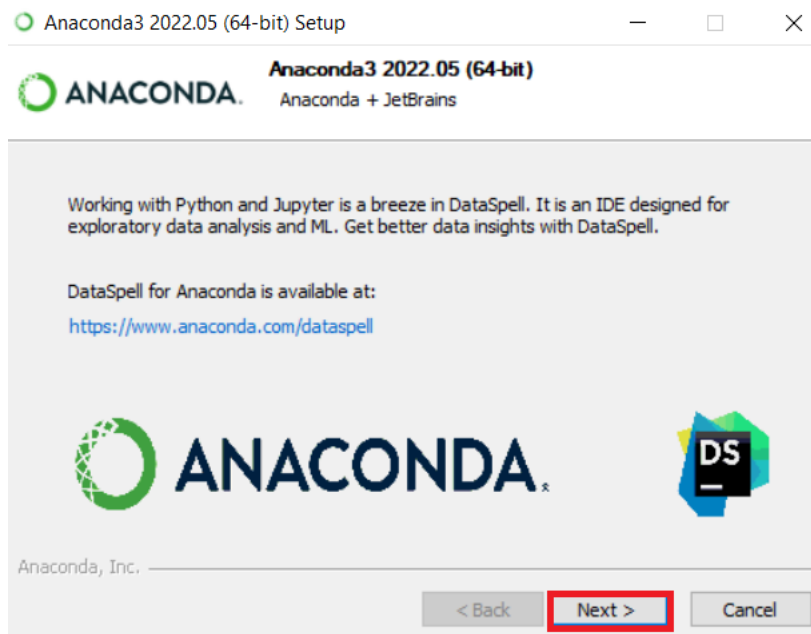

**Step 7:** In the **Advanced Installation Options** window, select **Register Anaconda3 as the default Python 3.9** option, and click **Install**.

**Step 8:** You need to wait for the installation to complete. Once installation completes, click **Next**.

**Step 9:** Click Next.

**Step 10:** Click **Finish** to complete the installation of the Anaconda distribution.

## Completing Anaconda3 2022.05 (64-bit) Setup

Thank you for installing Anaconda Distribution.

Here are some helpful tips and resources to get you started.  
We recommend you bookmark these links so you can refer  
back to them later.

## Exercise 2: Create Anaconda Environment

Anaconda environment is a directory containing a specific collection of conda packages you have installed. For example, you may have one environment with NumPy 1.7 and its dependencies and another environment with NumPy 1.6 for legacy testing.

Ref: <https://conda.io/projects/conda/en/latest/user-guide/concepts/environments.html>

**Step 1:** Open the **Anaconda Navigator** from the Windows Start menu.

Name	Description
✓ _ipyw_jlab_nb_ex...	A configuration metapackage for enabling anaconda-bundled jupyter ex
✓ aiohttp	Async http client/server framework (asyncio)
✓ aiosignal	Aiosignal: a list of registered asynchronous callbacks
✓ alabaster	Configurable, python 2+3 compatible sphinx theme.
✓ anaconda	Simplifies package management and deployment of anaconda
✓ anaconda-client	Anaconda.org command line client library
✓ anaconda-project	Tool for encapsulating, running, and reproducing data science projects
✓ anyio	High level compatibility layer for multiple asynchronous event loop imp
✓ appdirs	A small python module for determining appropriate platform-specific di
✓ argon2-cffi	The secure argon2 password hashing algorithm.
✓ argon2-cffi-bindings	Low-level python cffi bindings for argon2
✓ arrow	Better dates & times for python
✓ astroid	A abstract syntax tree for python with inference support.
✓ astropy	Community-developed python library for astronomy
✓ asttokens	The asttokens module annotates python abstract syntax trees (asts) wit
✓ async-timeout	Timeout context manager for asyncio programs
✓ atomicwrites	Atomic file writes
✓ attrs	Attrs is the python package that will bring back the joy of writing classe

430 packages available

**Note:** All the macOS users, select Update index and all your packages will be updated.

*Note: It is always helpful to create a separate environment because different projects require different packages.*

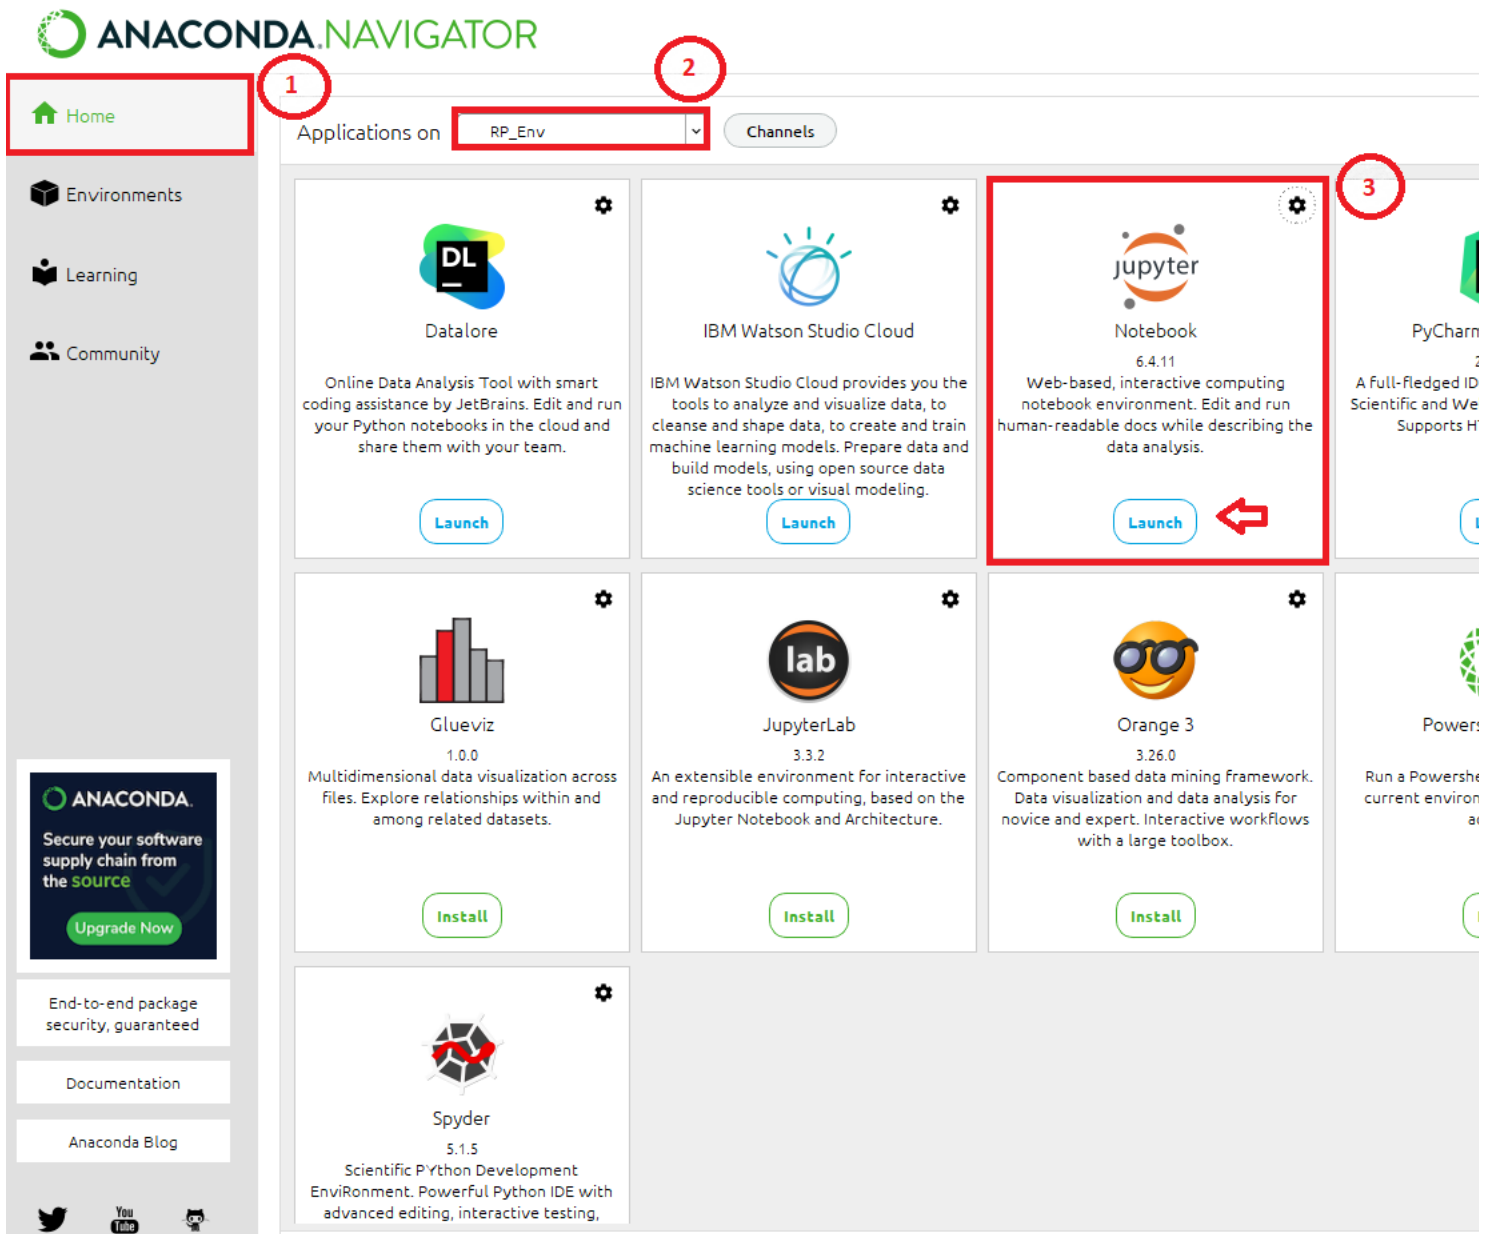

**Step 3: Give a name** for your environment, select the suitable version and language and click **Create**.

**Note:** The macOS users must uncheck Python and then create the environment.

**Step 4:** Once you create an Anaconda environment, go back to the **Home Page** and **Launch Jupyter** and create a **Python Notebook** (make sure to select the right environment).

**Note:** The macOS users need to restart their Anaconda prompt first and then launch their Jupyter Notebook.

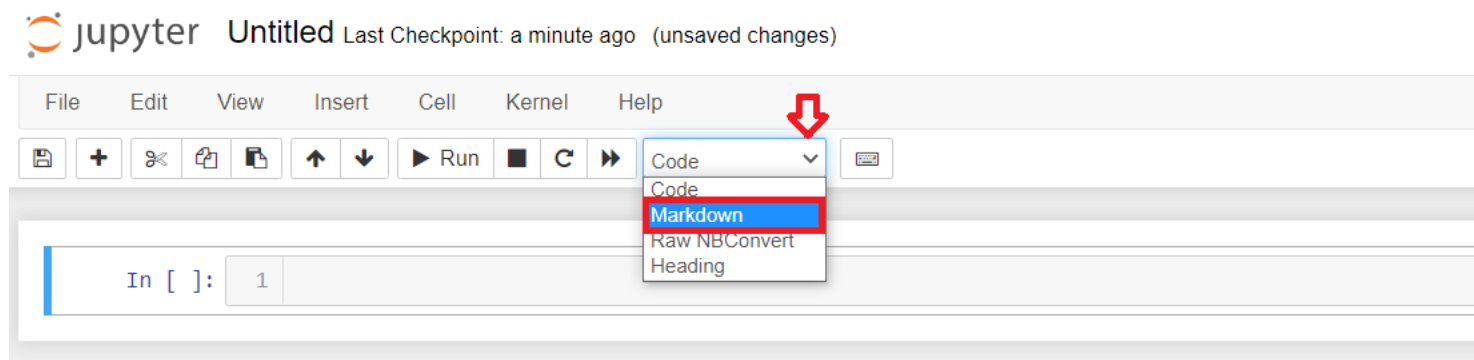

**Step 5:** This opens **Jupyter Notebook** in the default browser, and now you can select the **kernel** and create a **Notebook**.

## Exercise 3: Create and execute Python Jupyter Notebook

### 1. Create markdown cells and add text

In your notebook, **click any code cell**, and in the drop-down menu, change the cell type from Code to Markdown. You will notice that you cannot create Markdown cells without first creating and converting them from Code to Markdown.

In the Markdown cell, write some text like **My First Program**.

To render the Markdown text, make sure the cell is selected (by clicking within it), and press **Play** in the menu or **Shift+Enter**.

- 1
- # My First Program

Copied!

Your Markdown cell should now be rendered!

► Output

*Note: To edit your Markdown cell, double-click anywhere within the cell. Note you can use the keyboard shortcut: `[m]` - Convert Cell to Markdown.*

### 2. Create new cells.

- In your Jupyter Notebook, click any of the existing cells to select the cell.
- Click **Insert Cell Above** or **Insert Cell Below** to insert the cell from the Insert menu.

► Output

*Note: You can use the keyboard shortcuts: `[a]` - Insert a Cell Above; `[b]` - Insert a Cell Below.*

### 3. Write and execute code.

- In your new empty notebook, click within the gray code cell and write some code, like.

- 1
- 1+1

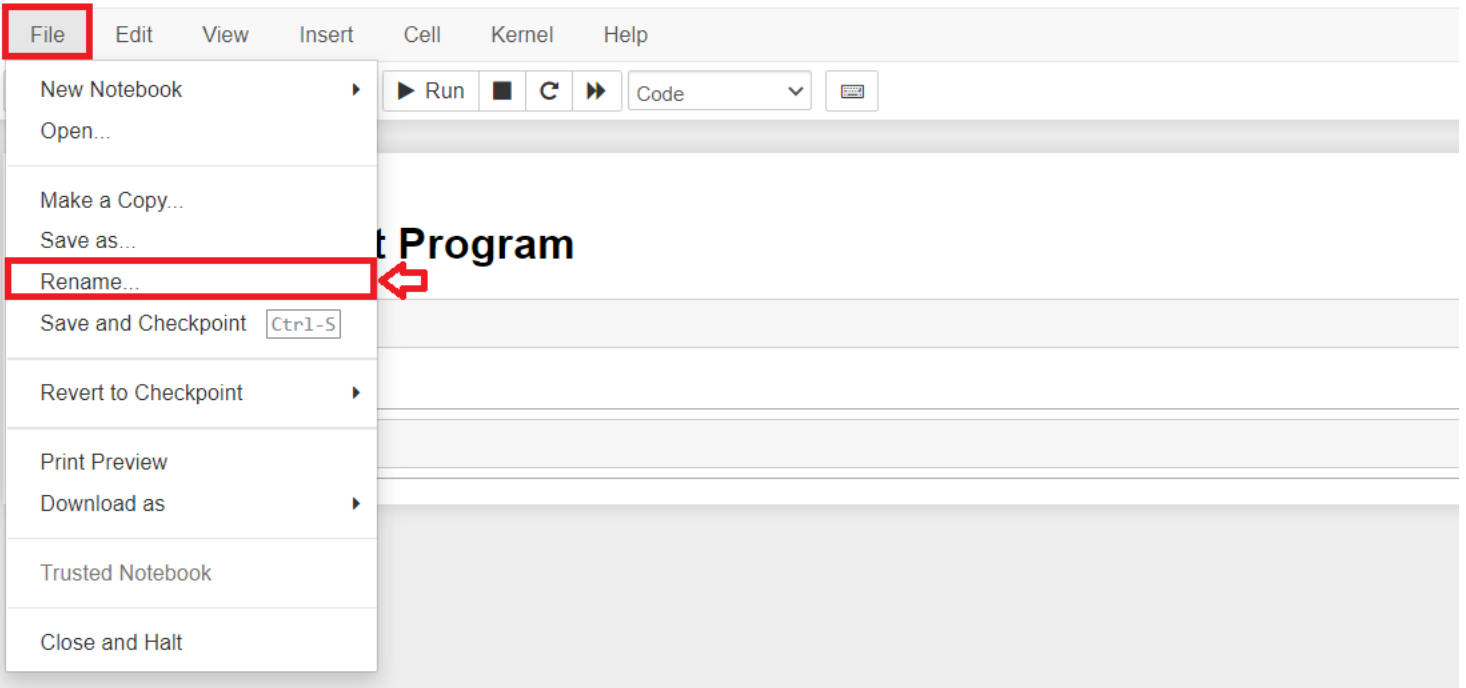

Copied!

- Execute the code by clicking the **Play** button in the menu above the notebook or pressing **Shift+Enter** on your notebook.
- You should see the output 2.

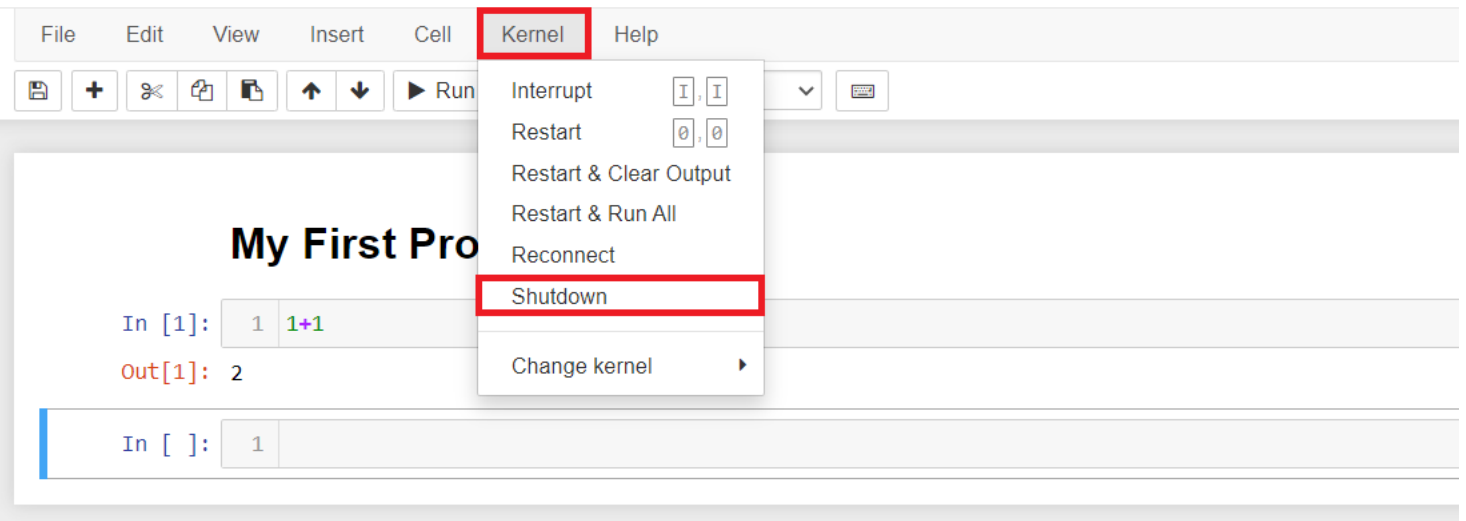

► Output

### 4. Rename, Shutdown kernel, and Save your Notebook

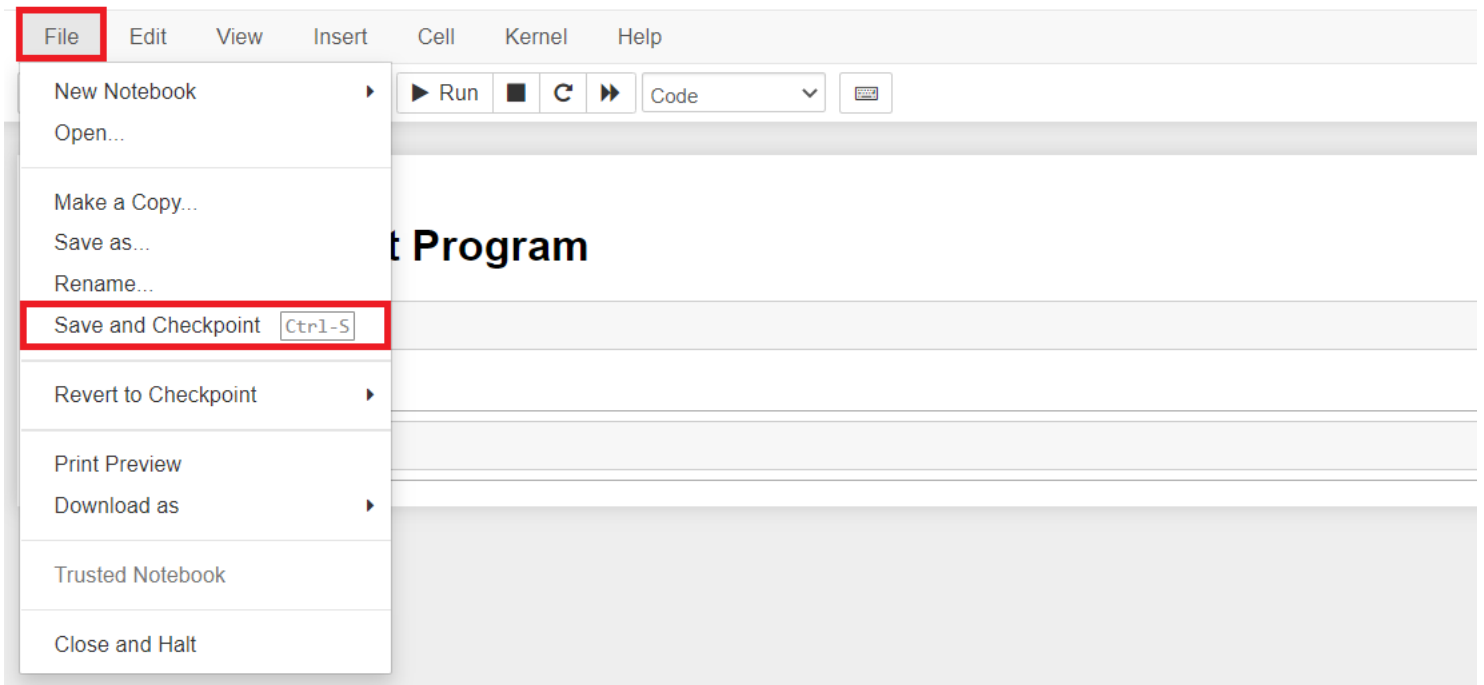

**Step 1:** Click **Rename** from the **File** menu to rename your notebook like *My\_Notebook.ipynb*.

**Step 2:** To shut down the kernel, click **Shutdown** from the **Kernel** menu.

**Step 3:** Click **Save Notebook** or **Save Notebook as** to save the notebook from the **File** menu.

**5. Open the recently created notebook.**

**Step 1:** Open **Anaconda Navigator** from the Windows **Start** menu and **launch Jupyter**.

## Practice Exercise

Let us try executing simple math operations

**Problem 1: Find the minimum and maximum values.**

```
1. 1
2. 2
3. 3
4. 4
5. 5

1. x = min(5, 10, 25)
2. y = max(5, 10, 25)
3.
4. print(x)
5. print(y)
```

Copied!

► Output

**Problem 2: Find the value of 4 to the power 3.**

```
1. 1
2. 2
3. 3

1. x = pow(4, 3)
2.
3. print(x)
```

Copied!

► Output

## Exercise 4: Create and execute R Jupyter Notebook

Select the kernel and create a Notebook.

Select items to perform actions on them.

☐ 0 ▾  /

☐  3D Objects

☐  anaconda3

☐  Contacts

☐  Desktop

☐  Documents

☐  Downloads

### Problem 1: Find the Multiplication of 2 numbers.

```
1. 1
1. 2 * 3 # Multiplication
```

Copied!

► Output

### Problem 2: Find the Subtraction of 2 numbers.

```
1. 1
1. 4 - 1 # Subtraction
```

Copied!

► Output

### Problem 3: Add 2 to the given number.

```
1. 1
2. 2
1. a <- 1 # Assigning 1 to the variable called "a"
2. a + 2 # Adding 2
```

Copied!

► Output

### Problem 4: Create a data frame

```
1. 1
2. 2
3. 3
4. 4
5. 5
1. df = data.frame(Emp_Name = c("Jai", "David", "Michael"),
2.                  Job_role = c("Manager", "Team Lead", "Developer" )
3.                  )
4.
5. print(df)
```

Copied!

► Output

**Congratulations! You have learned how to download and install Anaconda on your local machine and create a new environment. You have also created a Jupyter Notebook and saved it.**
