

**Effort: 20 mins**

## Objective

In this lab, you will learn:

0. Import a Jupyter notebook in a Watson Studio Project
1. Perform the tasks in the Jupyter notebook

## (Optional) Pre-requisite: IBM Watson Setup

If you have not created a Watson service and added a project in it, before proceeding with this lab please ensure you complete the previous lab: [https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0101EN-SkillsNetwork/labs/FinalModule\\_Coursera/IBM\\_Cloud\\_and\\_Watson\\_Setup.md.html](https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0101EN-SkillsNetwork/labs/FinalModule_Coursera/IBM_Cloud_and_Watson_Setup.md.html)

## Step 1: Adding a Notebook to the Project:

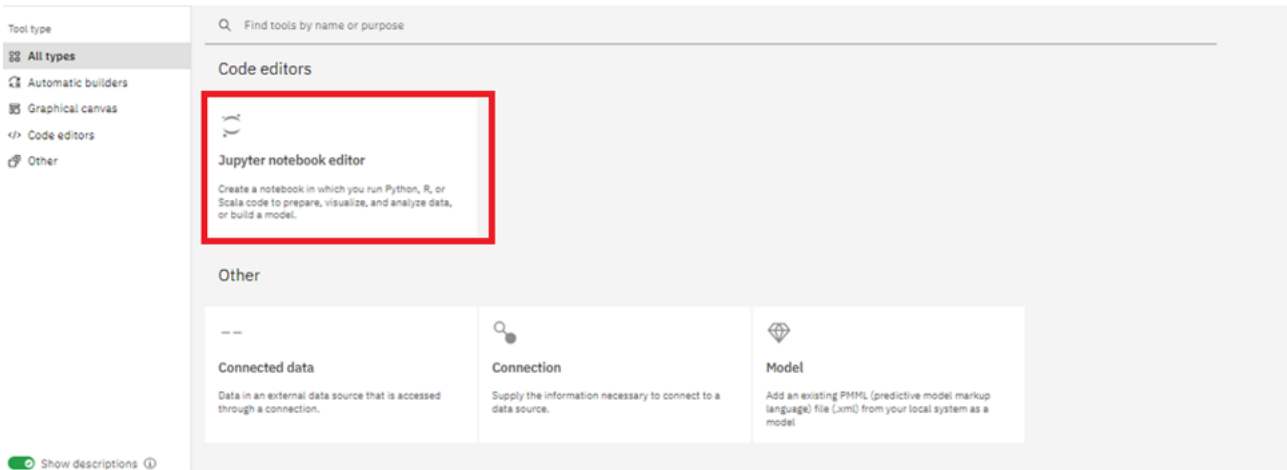

You need to add a Notebook to your project. Click on **Assets > New asset**.

The screenshot shows the IBM Watson Studio interface for a project named 'IBM\_Project'. The 'Assets' tab is selected, indicated by a red box and a red circle with the number '1'. The 'Add asset' button is highlighted with a red circle and the number '2'. The interface includes a search bar, a list of assets (currently empty), and a section titled 'Start adding assets' with instructions to click 'New asset' or 'Add asset'.

Scroll down and select **Jupyter Notebook Editor**:

## Add to project

Select the tool to create an operational or configuration asset.

Note: Select the default Python as selected language.

On the New Notebook page, enter a name for the notebook, and then click From URL.

Paste the URL you copied from the previous reading in the course into the **Notebook URL** box, and then click **Create Notebook**.

## New notebook

Blank From file **From URL**

Name

Final\_Assignment

Description (optional)

Type your description here

Select runtime

IBM Runtime 22.1 on Python 3.9 XXS (1 vCPU

The selected runtime has 1 vCPU and 4 GB RAM. It consumes 0.5 capacity units per hour. [Learn more](#) about capacity unit hours and Watson

Notebook URL

<https://cf-courses-data.s3.us.cloud-object-storage>

You will see a Notebook like this (the actual notebook may be different from the one shown in the screenshot below):

**Skills**  
Network

## Extracting and Visualizing Stock Data

### Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. When you will extract some stock data, you will then display this data in a graph.

## Table of Contents

- Define a Function that Makes a Graph
- Question 1: Use yfinance to Extract Stock Data
- Question 2: Use Web scraping to Extract Tesla Revenue Data
